OVERVIEW

Actuarial student interested in data and programming. I enjoy staying up to date with technology and attending tech events to learn about innovations, companies, and products. These activities have allowed me to connect with people who share similar interests and knowledge.

I am a reader of data science outreach material and maintain a subscription to MIT Technology Review and other publications. Altogether, these activities align with my goal of continuous learning.

I consider curiosity my main driving force, a quality I elaborate on further in the final section of this document. I may be the person who has walked the most across the Metropolitan Area of the Valley of Mexico.

EDUCATION

Actuarial Science — Facultad de Ciencias, UNAM

Currently in the eighth semester, expected graduation (June 2026)

Relevant coursework course:

- Mathematical Logic
- Finance
- Probability
- Linear Algebra
- Statistics
- DataBase Management

TECHNOLOGIES

Proeficient in: Python, R, Git, GitHub, Excel, Tableau, SAS

Currently learning: Power BI, Databricks, Snowflake

Interested in learning: AWS

Material and Learning

Personal Library focused on Python, R, SQL, C, Tableau, Excel, Linear Algebra, Probability, Statistics, and Machine Learning.

CERTIFICATES AND COURSES

Curso de Ciencia de Datos

august 2025 – september 2025

Diplomado en Seguros

june–august 2025

PERSONAL PROJECTS

- A large number of economic crises are linked to credit risk; therefore, through logistic regressions and SQL database management, SAS, and Excel, I built a credit model aligned with regulatory frameworks such as Basel III, estimating the probability of default of each client based on a set of various qualitative and quantitative variables.
- I run through all of Mexico City, across streets and avenues of all kinds, always based on time and cost estimates per route, allowing me to explore and discover a variety of places that most people in this city are unfamiliar with.
